

Master Information Technologies

The graduates of this program will complete their technical knowledge in order to develop good software applications, by acquiring skills on modelling, design, testing, and maintain software, and participating in professional activities based on communication, teamwork, management of complex tasks, interdisciplinary cooperation. The courses of this master give a solid and cutting edge training in the field.

The program is suitable for those who are fascinated by the world of programs and interaction with computers. Those who like to develop computer applications, to discuss with others for finding out the most suitable software solutions for the problems, persons with logical, structured thinking are suitable for this Master.

Our teachers are renowned specialist with rich scientific research activity, recognized abroad.

Our labs are well equipped, therefore the students benefit from a practically oriented training.

Thus, our Alumni have good opportunities to be in high demand, by big IT companies, but not only. They will contribute to the achievement, implementation or exploitation of information systems, not only as performers but also - in time - as coordinators, project managers, a.s.o.
